This information comes from the Experiment station at Burlington, in the shape of a bulletin, "sent free of charge to any address on application." The bulletin says that the Addison county apple crop was 30,-660 barrels in 1900, and 10,870 barrels this year.

These figures are for the market crop. Considerable quantities of apples were also used at home. At least there is nothing to show that going without apple pie and apple dumplings this year.

The average price for apples this year is probably not far from \$3 a barrel. Good fruit is now selling much higher, of course; but for the entire crop, this is a fair estimate.

This report goes on to say that, while Addison county is well up on quantity, it is considerably behind on quality. Methods of cultivation, poor, and as a result much of the truit is poor.
